

## Organisation

The e5-programme, the Austrian version of the European Energy Award (eea), was launched in 1998. It provides municipalities with practical, long-term support in the fields of energy efficiency and climate protection and has become one of the umbrella programmes for the eea.

The success of a municipality is measured in “e”, with the number of “e”s representing the scope of energy measures implemented in the municipality. The most dedicated municipalities achieve “eeee”, which is how the Austrian programme name “e5” originated. On the European level, “eee” corresponds to the European Energy Award and “eeeee” to the European Energy Award Gold.

The Austrian programme “e5 Österreich” is managed by the Austrian Energy Agency as part of the initiative “klimaaktiv” of the Austrian Ministry of the Environment in cooperation with seven Austrian provinces.

## Status of the eea in Austria

The programme today reaches municipalities and cities which account for more than 20% of the Austrian population. Seven of nine Austrian provinces take part in the e5 / eea programme. At the beginning of 2018, there were 277 e5 / eea municipalities and cities participating, 107 of which have been awarded the eea and 22 of which have reached Gold status.

All participating municipalities have been transformed through the step-by-step quality process of the programme. To date, 1,600 e5 team members in participating communities have implemented more than 10,000 energy-related measures.

## Figures

Number of municipalities	
- participating in total	277
- awarded eea	107
- awarded eea Gold	22
Population involved	2.3 m
1st eea award	1999
1st eea Gold award	2004

Status beginning of 2018

Participating municipalities by number of inhabitants:

## European Energy Award

The European Energy Award (eea) is a quality management and awarding system for municipalities committed to sustainable municipal energy, climate and transport policies. From spatial planning to energy supply, from mobility to communication and cooperation – the eea comprises the full range of proven energy and climate protection measures municipalities can take. The eea is therefore the most comprehensive quality management system for municipalities in the field of energy efficiency.

The eea takes particularities of individual countries and regions into account, yet provides for benchmarks to be established between municipalities at a European level. At the European level, the eea is interlinked with other programmes such as the Smart Cities initiative and the Covenant of Mayors and corresponds to the 20-20-20 objectives of the European Union for 2020. Today, more than 1,500 municipalities are participating.

Further information: [www.european-energy-award.org](http://www.european-energy-award.org)

- Ordinary member countries: Austria, France, Germany, Italy, Liechtenstein, Luxembourg, Monaco, Switzerland
- Pilot countries: Romania, Ukraine

## Participating municipalities in Austria

### Awarded eea Gold

Arnoldstein  
Dornbirn  
Eisenkappel-Vellach  
Feldkirch  
Götzis  
Großes Walsertal  
Hittisau  
Judenburg  
Kötschach-Mauthen  
Langenegg  
Mäder  
Reißeck  
Spittal an der Drau  
St. Johann im Pongau  
Trebesing  
Villach  
Virgen  
Weißensee  
Weiz  
Wolfurt  
Wörgl  
Zwischenwasser

### Awarded eea
