

Being convincing about public transport: hard and soft measures for a greener mobility in Florence

Chiara Lorenzini, Municipality of Florence

November 6th, 2021

Setting the (pre-covid) scene

- Population: ~ 360.000
- Daily users: average 500.000, peak 600.000 (mobile analytics)
- 14,9 M overnights/year
- Trips by car: 900.000 trips/day (540.000 internal)
- Bus and tram: 150.000.000 passengers/year
- Urban rail: 19.000.000 passengers/year

Commitments (and results)

- 2015 **Smart city plan**: - 20% in 2020, - 45% in 2030, - 75% in 2050
- 2011 **SEAP** target: 20%
 - ✓ Result: over 40% in 2020
- 2021 **SECAP** (updated) target: 60% in 2030

Baseline inventory 2005: **34% of emissions due to transport sector**

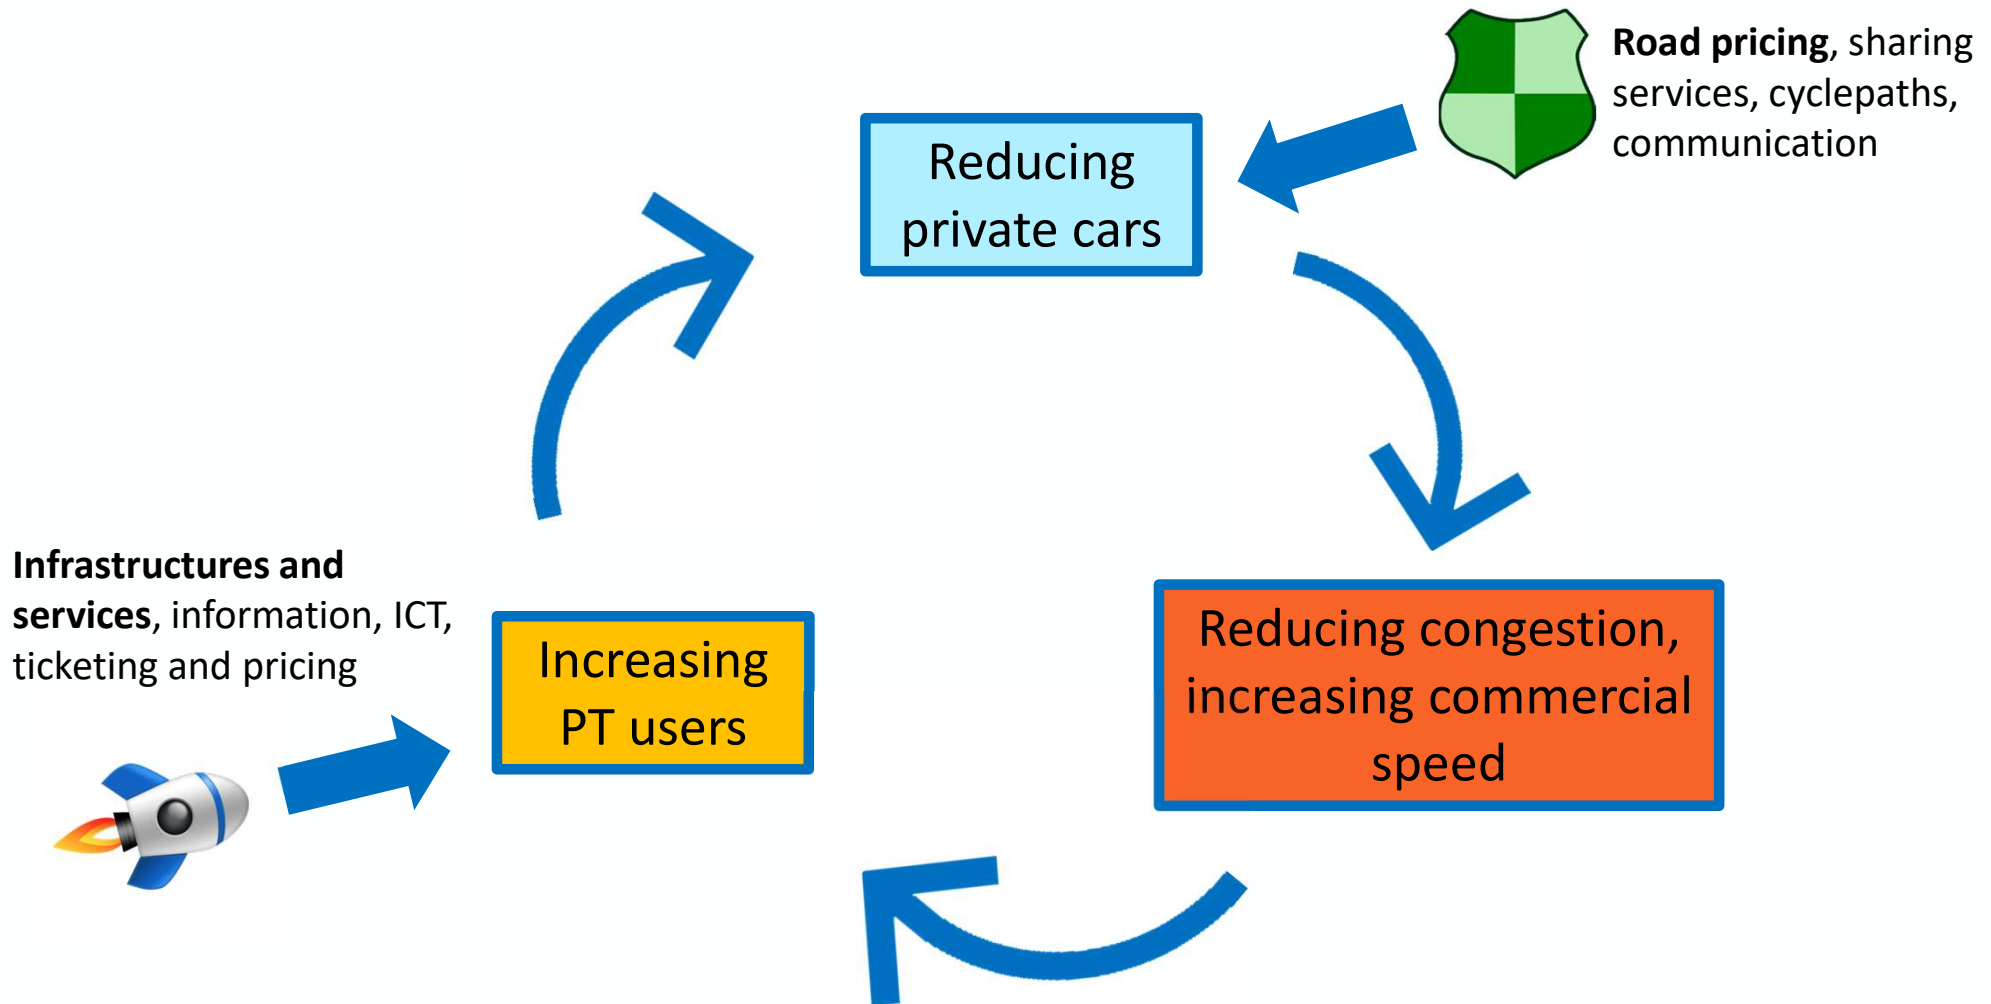

SUMP: from planning to action

SUMP approved in 2021 (at metropolitan level)

- ✓ PT infrastructures supply (tramway and BRT)
- ✓ interchange hubs
- ✓ ticketing
- ✓ sharing mobility services and cycling/walking for first and last mile
- ✓ Low Emission Zone & Congestion Charge
- ✓ ICT tools
- ✓ building a mobility users community

How to trigger a virtuous cycle

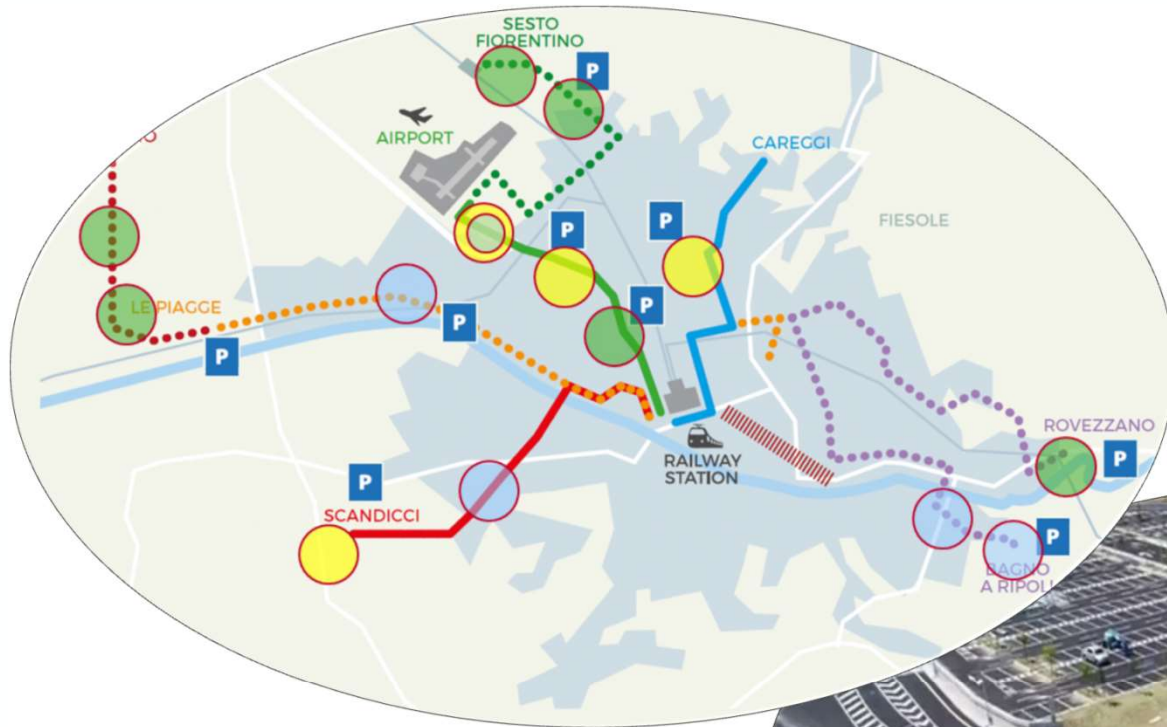

Today tramway network

Tomorrow tramway network

Interchange hubs

Accessible directly from the motorway
and connected to the tramway

Interchange hubs

Today, central railway station

Tomorrow, e-bike parking/charging
stations for private bikes

USER-CHI
CHARGING YOUR E-MOBILITY FUTURE

Ticketing

- Urban single ticket (bus, tram and train)
- Student card (48 euro, annual ticket, urban transport)
- Integrated regional fare system for buses
- Metropolitan integrated ticketing (all PT modes)
- Integrated PT+sharing ticketing

Ticketing

- Account based ticketing
- Dynamic QR code
- EMV contactless (in progress)
- Host card emulation (HCE, in progress)

Free floating service

- 2.000 bikes
- 1.000 e-bikes
- 600 motorbikes, 5 operators
- 900 e-scooters, 3 operators

Since 2021 bike sharing (1,3 M trips/year) is framed as a **public service**

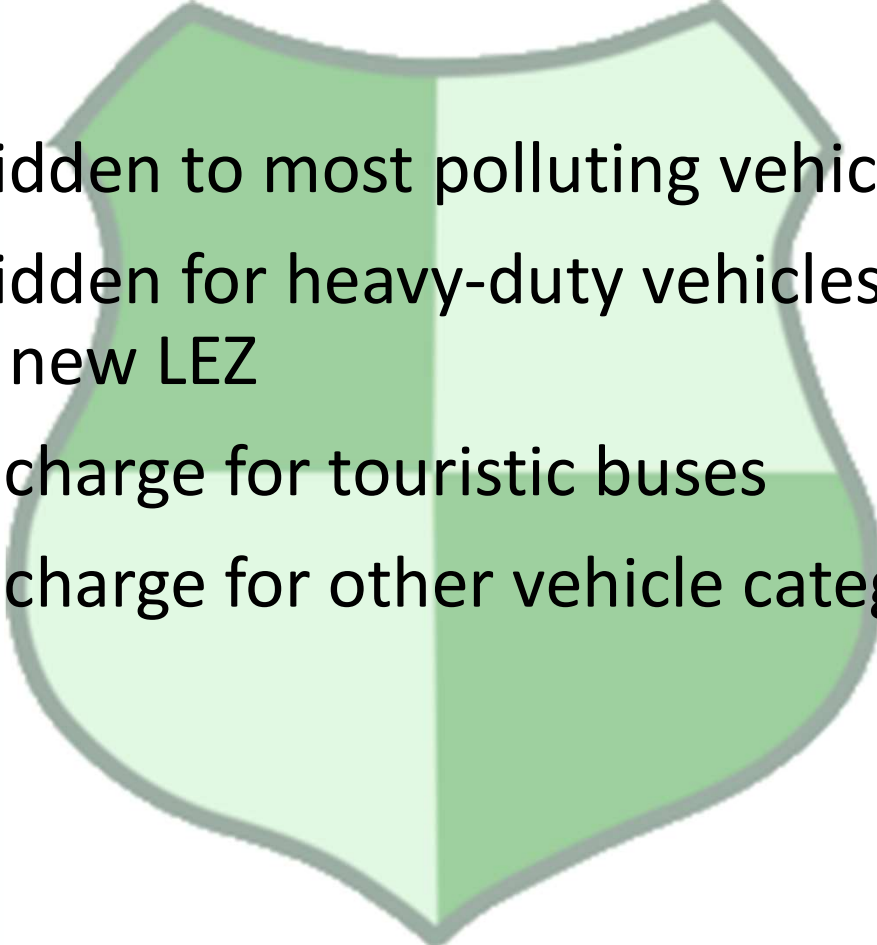

Congestion charge: Green Shield system

Progressive introduction of prohibitions and/or costs for accessing the urban centre, well balanced with a concurrent increase in PT supply

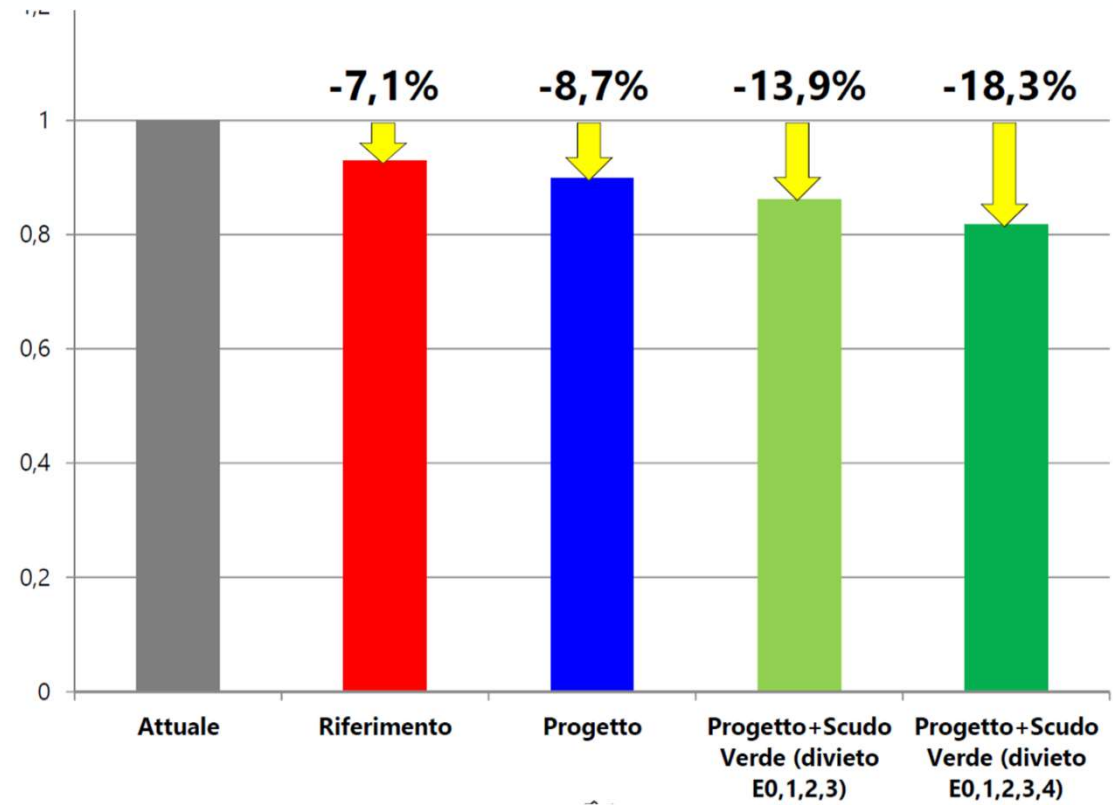

Green Shield system policy

- 
- Access forbidden to most polluting vehicles
 - Access forbidden for heavy-duty vehicles, with O/D outside the new LEZ
 - Congestion charge for touristic buses
 - Congestion charge for other vehicle categories (phase 2)

Impact simulation

Distance covered, peak hour, Florence area [vehicles*km]

Impact simulation

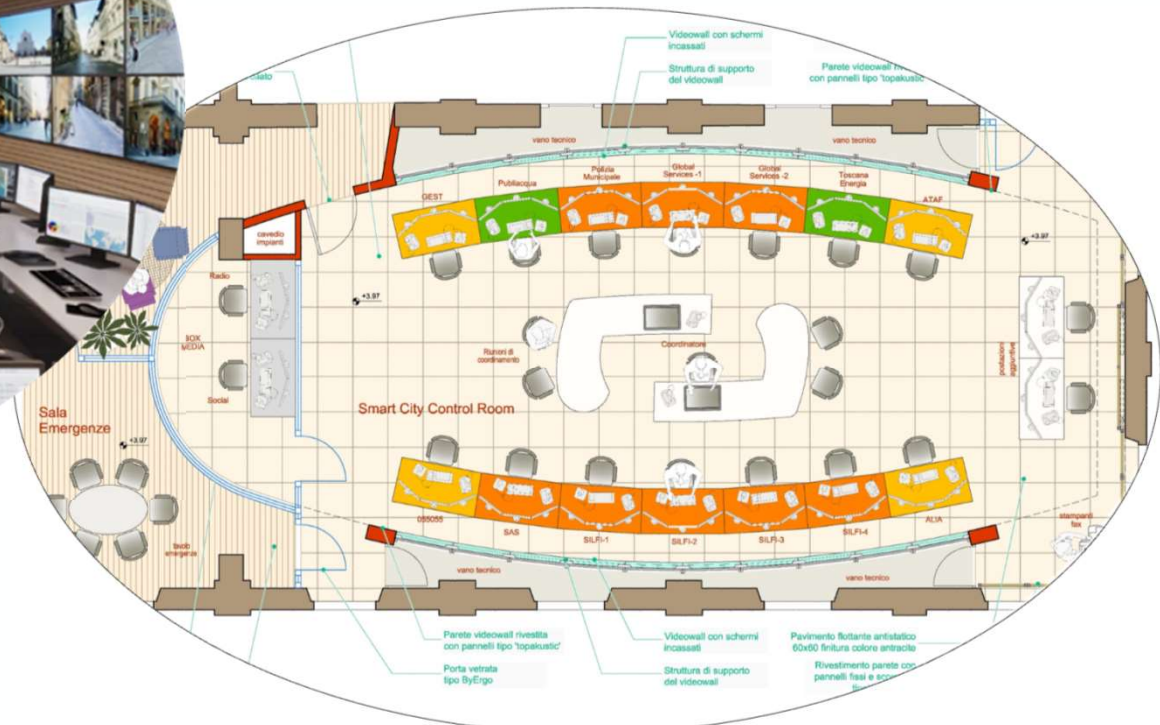

- Transport modelling has been used to simulated different scenarios according to different policies options:
 - Green shield, Euro 0, 1, 2, 3, 4:
 - - 235.000 trips by car
 - +130.000 trips by train
 - + 100.000 trips by tram
 - +25.000 trips by bus

The Municipality decided to invest the income from road pricing to strenghten public transport (starting from integrated ticketing)

Real time transport management

- Cooperative space
- Municipality and utilities, included PT operators, work together for planning and real time traffic management
- B2G data sharing space

Keeping users informed: IF App towards MaaS

- real-time **public transport data**
- real-time **availability of shared vehicles**
- **unexpected events** on the network causing congestion or dangerous situations for drivers (closures, accidents, hazardous material, traffic jam)
- LEZ accessibility
- charging points availability
- **restrictions due to road works** (real-time and planned)
- Available bikes and renting (through deep link)
- PT ticket purchasing

Understanding our users: IF infomobility platform

Users mobility behaviour data analysis(back-office webapp)

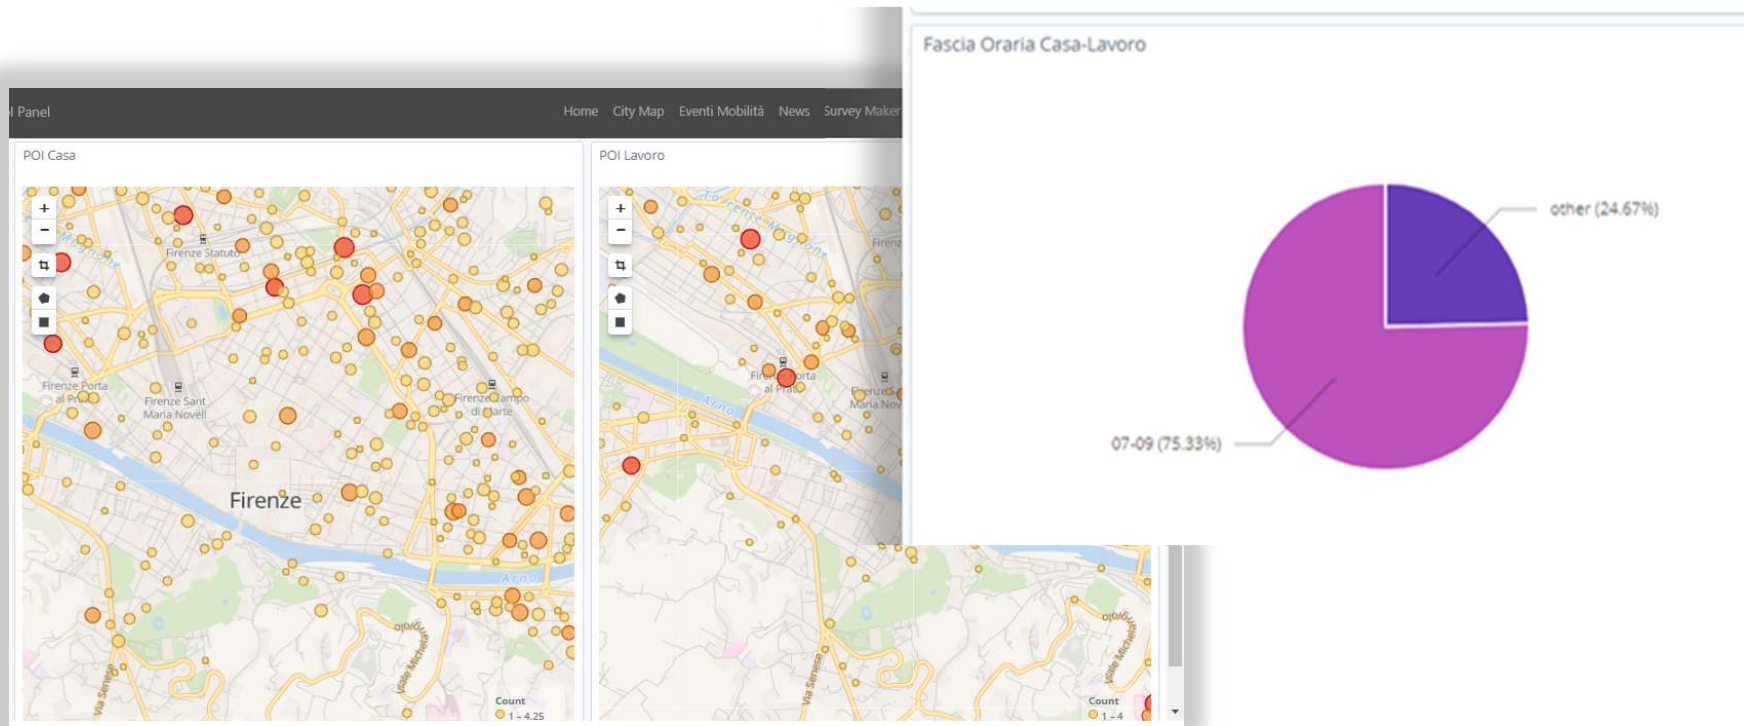

- mobility preferences settings
- season ticket and permit ownership
- feedback on service quality
- answers to surveys
- interactions with the App (searched info, browsed news, etc.)

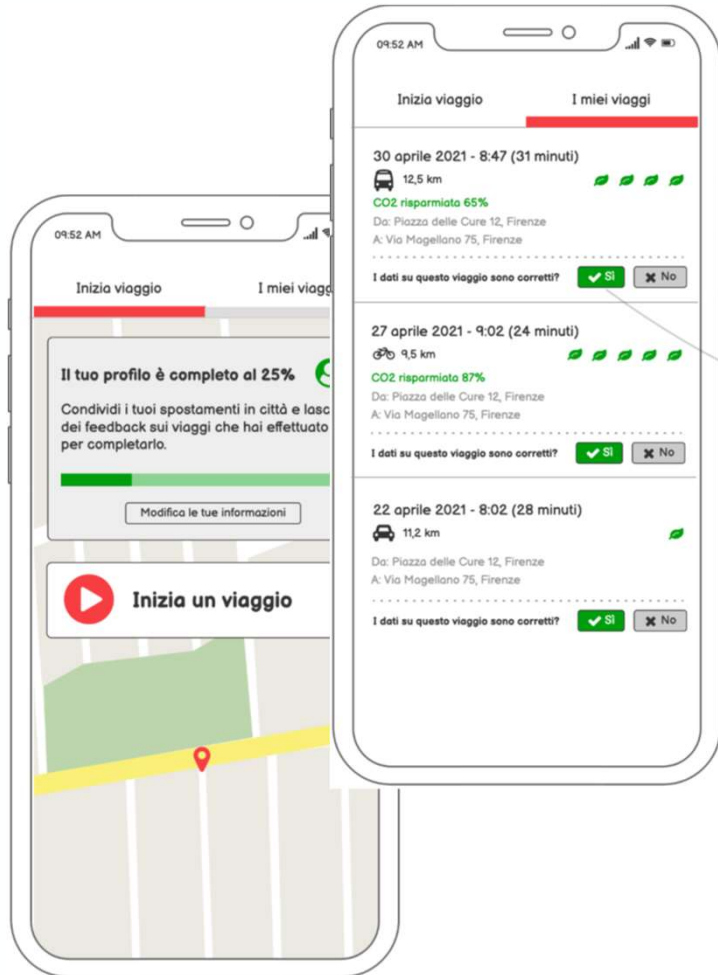

Understanding our users: IF infomobility platform

Users mobility behaviour data analysis(back-office webapp)

- O/D, time of trips

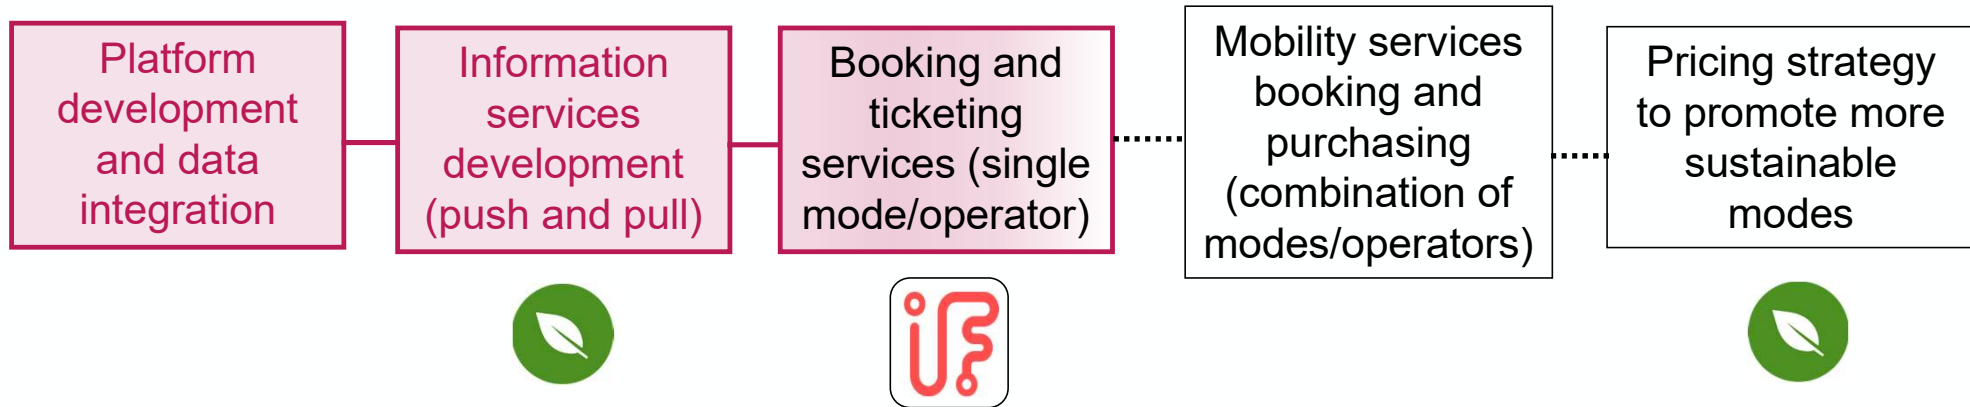

Citizens engagement: Greenfinity project

- Users self-awareness of different mobility behaviours
- Gamification
- Rewarding system for virtuous users, i.e. 'modal shifters'
- Data gathering and analysis

Florence's path to MaaS

Mobility users community

- SUMP participatory processes
- Thematic meetings per district
- Mobility management actions
- Educational activities

Summary and conclusions

- Investment in new infrastructures for PT (tramway and interchange hubs)
- Congestion charge for reducing private cars
- First and last mile sustainable solutions
- Digital tools to increase information and awareness
- Ticketing (integrated fare system)
- MaaS to promote more sustainable mobility solutions

A photograph of a modern tram on tracks. The tram is white with a red front and has the number '2031' and 'GEST' on it. A cyclist is riding a bicycle in the foreground, crossing the tracks. There are pedestrians on the sidewalks. The scene is outdoors with trees and buildings in the background. A red vertical bar is on the right side of the image.

Thank you!
